### **BAB** I

### **DASAR TEORI**

## PHP dasar

PHP (preprocessor Hypertext) adalah bahan scripting yang menyatu dengan Heme dan dijalankan pada server side - Artinya semua sintrak yang di berikan akan sepenuhnya di jalankan pada server, sedangkan yang di kinimkan Ice browsur hanya hasilnya saja berrpa Hetme.

Untuk membedakan perintah Heme dengan phip maka digunakan tanda

Ziphp -- 27. Phi dapat diaphikasikan dengan bertsagai macam database.

Seperti mysal opostogic sal oracle dan lainnya.

Beberapa script dasar PHP

- · menanpilkan text echo "Haio apa kabar";
- variabel

  Variabel diawali dengan tanda \$, yang berstat case sensitive

  Contoh \$nual = 100;
- Operator attenstika
  daftar operator attenstika
  Nama Conton
  Penjumlahun \$a+\$b
  Pengurangan \$a-\$b
  Perkation \$a\*\$b
  Pembagian \$a/\$b
  moduur. \$a%\$b
- Operator penugaran ,

  Operator ind munggunaian tanda "="

  Conton & nilal = 10, berarit massician & nilad dengan 10

conton.

- Operator personaling dayfor operator pumbonding hama

Sama dungan

| fa == \$b |
Hadak sama dungan	\$a != \$b
lebih kecil	\$a < \$b
Lebih berar	\$a > \$b
Lebih kecil atau sama dungan	\$a > \$b
Lebih berar atau sama dungan	\$a > \$b
Lebih berar atau sama dungan	\$a > \$b

- Operator logina operater logika dastar keterangan Mama Conton fass & b alau \$ a and \$ b benar jua sa don sib bernilai benar. AND \$ 9 11 \$6 atau \$ a or \$ 6 benor sika fa atau \$6 bernilai benor. OL \$a xor \$b KOR salah saru dari keduanya bennulai benar tidak ! \$a. terapi feedva -duanga. POT Benar zum sa tidak benar.

- Percabangan = 15, else, esself, swith ... case.
- Pendangan = for , foreach, do-while while.
- Form contoh < form name = "form!" id = "form!" method = "post" action = "proser\_ping">

  keterangan.

  id mentpakan identifar yg diginakan unitu pemrograman dlim javagript.

  name name form.

method, cara form melakukan proser penguiman data terdapat 2 junir yantraction, file tujuan untuk proser penguiman data.

- form elument.

- \* text field. \* Padio brition & submit.
- \* Hudden field. \* List / monu
- \* Test area. \* File Field
- \* check box \* Button
- Parameter Post dan GET.

element - element form youth denyan mengge nakan paramoter.

- & Bost, digmakan untur mengambil informasi yang dikirim kan malalori contoh : fuser = \$- Post ["username"];
- \* GET : digunakan untu mengambil istformasi yang dikirim lewat ure.

  Contoh : \$ user = \$-GET [" vrername"];

### **BAB II**
